

## Business Systems Analyst

<b>Business Area</b>	IT Solutions
<b>Location</b>	Aberdeen
<b>Working Base</b>	Office / Hybrid
<b>Working Pattern</b>	Permanent / Full Time

The Business Systems Analyst will work as part of the IT Solutions Team to implement change throughout the Group. They will work with business users and development team to create functional specifications, test solutions, and produce documentation on system enhancements alongside traditional business analysis skills. The individual is expected to be able and willing to work to the vision, strategy, and core values of the Group.

### Duties & Key Accountabilities

- Supporting business transition and helping to establish change.
- Gathering, identifying, and documenting business requirements using proven analysis methodologies.
- Work effectively with internal and 3rd party providers to scope, implement, test and deploy solutions.
- Any other duties as required as assigned by the IT Solutions Manager.

### Experience & Qualifications

#### Mandatory

- A degree or higher education qualification in a numerate discipline and/or relevant experience within a commercial IT environment.
- Solid capability using Microsoft Office (Excel, PowerPoint, Word).
- Experience in project or process management working as a business analyst for at least 2 years.
- Strong analytical and problem-solving skills.
- Excellent written, verbal and collaboration skills with the ability to engage effectively with stakeholders at all levels.
- Communicate requirements clearly and accurately to the Software Development team for solution development.

#### Preferred

- Experience providing solutions with the Microsoft Power Platform (Power Automate, Power BI)
- Business Analysis Certification (BCS) or PRINCE2 or other equivalent certifications
- Experience working in an Agile or Scrum development environment
